

## JASPER offers a wide variety of gaseous prepped engines.

Gaseous prepped engines can be operated on LP gas, CNG, methane and digester gas.

Our gaseous prepped engines are completely remanufactured using all new internal parts: pistons, rings, bearings and timing components, valve springs, retainers and lifters. These engines feature **hardened exhaust valves, seats and graphite coated pistons**. All other castings and components will be remanufactured back to O.E.M. specifications.

These engines are completely reassembled and live run tested with checks on oil pressure, water temperature, vacuum and compression. These engines include the block, head, oil pump and pan, timing cover and finishing gaskets.

Call and ask us for details.
